**READ SAFETY DIRECTIONS
FOR ANIMAL TREATMENT ONLY**

Fel-O-Vax® Lv-K  **Boehringer
Ingelheim**
**Vaccine
(Inactivated)**

Active constituents

Each 1 mL contains inactivated feline leukaemia virus (FeLV, RP ≥ 1.0), amphotericin B, polymyxin B, neomycin and thiomersal added as preservatives.

An inactivated vaccine for the active immunisation of kittens and cats 10 weeks of age or older against disease caused by feline leukaemia virus.

To be used by, or under the direction of a registered veterinary surgeon.

Net contents
25 x 1 mL vials

It is illegal to sell individual vials separately.

**Directions for Use
Precautions**

Vaccinate only healthy cats or kittens with normal temperatures.

Animals under treatment with immunosuppressive drugs should be vaccinated with caution.

Studies to support the use of the product in pregnant queens have not been conducted.

Side Effects

Some animals may show transient post-vaccination reactions including pain, malaise and depression.

Allergic reactions such as anaphylaxis occur rarely and may require parenteral treatment with an antihistamine, a corticosteroid or adrenalin as appropriate.

Local site reactions after vaccination are rare but transient swelling, pain and subcutaneous thickening have been reported.

Dose and administration

Shake the bottle well to obtain a uniform suspension of the vaccine before administration.

The entire contents of the bottle should be used immediately after opening.

A new sterile syringe and needle should always be used to administer this vaccine.

Dose

Withdraw the contents of a single dose vial (1 mL) aseptically into a sterile syringe and inject subcutaneously.

Recommended Vaccination Plan

Fel-O-Vax Lv-K Vaccine (Inactivated) can be used on its own or as part of a standard vaccination program.

The following vaccination program is recommended for cats and kittens

Cats aged 10 weeks and older	For an initial vaccination course, two doses are required, injected at intervals of 3-4 weeks.
Booster Vaccination	Annually booster with a single dose of vaccine.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 131126.

Additional user safety information:

Self-injection: Take care to avoid self-injection. In the event of self-administration, seek prompt medical attention and take this package leaflet/carton with you. If possible the application of gentle squeezing pressure with absorbent material (e.g. facial tissues) at the injection site will swab up unabsorbed vaccine. Strong squeezing of the site should be avoided. The damaged area should be thoroughly cleansed and a topical antiseptic applied. Accidental self-administration may result in local bruising, severe pain and swelling, particularly if injected into a joint or finger, and in rare cases could result in the loss of the affected finger if prompt medical attention is not given. If pain persists for more than 12 hours after medical examination, seek medical advice again.

Disposal

Discarded syringes and needles should immediately be placed in a designated and appropriately labelled "sharps" container. Discarded vials should immediately be placed in a designated and appropriately labelled "biologicals" container.

Storage

Store between 2-8°C. Do not freeze. Protect from light.
